Work Experience

Makebell Ltd. — Central, Hong Kong (Remote)
AI Engineer — *June 2026 – Present, Full-time*

- Built core components of the document-automation agent for an AI legal drafting platform: multi-turn **DOCX drafting and redlining** workflows using the Claude Agent SDK, producing Word-native tracked-change deliverables.
- Designed the document provenance and lineage system ensuring cumulative and version-to-version redlines resolve against the correct baseline, with fail-safe handling for re-uploads, lineage forks, renamed files, and adversarial inputs, backed by 18+ test suites.
- Built the OCR/ingestion pipeline and multi-model LLM orchestration across Anthropic and DeepSeek, alongside the in-browser DOCX viewer/editor and agent runtime security, concurrency, and sandboxing controls.

Askturing.AI — California, USA (Remote)
Full Stack Software Engineer — *July 2024 – May 2026, Full-time*

- Architected and executed agentic AI workflows (Cursor, Claude Code) to automate routine engineering tasks and accelerate delivery across frontend, backend, and admin surfaces.
- Designed and shipped large-scale analytics and billing-intelligence features (multi-tenant usage and credit APIs) in **Python, FastAPI, and PostgreSQL** on a **SOC 2 compliant LegalTech** platform.
- Built the internal admin application for **RAG benchmarking and model evaluation**, giving the team a repeatable way to compare retrieval and model configurations, alongside user lifecycle and role-based access control (RBAC), collaborating in a remote-first, async global team.

Bangladesh Math Olympiad — Bangladesh
Academic Team Member — *2022 – Present*

- Train students at Olympiad Camps, running classes and tests.
- Develop questions, evaluate answer scripts, and prepare results for National and Regional Olympiads.

CSEDU Students' Club — University of Dhaka
Secretary of Seminar & Workshop — *2023 – 2025*

- Organize departmental events and collaborate with other DU departments for inter-department activities.

Notre Dame Math Club — Notre Dame College
Head of HR & Coordinator — *2020 – 2021*

- Arranged sessions with researchers and teachers from home and abroad, and organized large-scale events to foster students' passion for mathematics.

Education

University of Dhaka — Dhaka, Bangladesh
CSE, 4th Year 1st Semester; ***CGPA: 3.74/4.00*** — *September 2022 – December 2026 (Expected)*

Notre Dame College — Dhaka, Bangladesh
HSC; ***GPA: 5.00*** — *2019 – 2021*

Technical Skills

Languages: Python, TypeScript/JavaScript, C++, Java, Go, Rust, SQL, LaTeX

AI & ML: Claude Agent SDK, Anthropic/Gemini/DeepSeek APIs, RAG and vector search (ChromaDB), TensorFlow/Keras, PyTorch (Ultralytics), ONNX Runtime, NumPy, OCR pipelines; dataset preparation, cross-validation, model evaluation, production deployment

Engineering & Other: FastAPI, Next.js/React, PostgreSQL/Supabase, Docker, Kubernetes, gRPC, Git/GitHub, Manim, Blender, Photoshop, Olympiad Mathematics

Achievements

Champion, Robi Axiata Data Privacy Avengers 2026: National case competition run by Robi Axiata, placing first out of **700 teams** as team *Thought Police*. Designed **SHOCHCHO**, a six-layer privacy control plane for telecom compliance with Bangladesh's **Personal Data Protection Act 2026**: a consent-enforcing gateway as the only exit for customer data to vendors and **AI models**, and revocable **AI Passports** for model governance. Pitched to Robi senior leadership and defended the design in live Q&A.

3rd Place, Bengali LLM Hallucination Detection Challenge, IUT 12th ICT Fest 2026: National datathon on detecting hallucinated **LLM** outputs in Bengali, finishing at **0.904 macro-F1**. Our system splits each case into grounding vs closed-book factuality over a **retrieval and LLM-as-judge** stack (Qwen2.5, BGE-M3, NLI), then settles it with a deterministic gold-answer verification layer that lifted 0.831 to 0.904 on CPU with **no fine-tuning**. Co-wrote the solution paper. GitHub

3rd Place, Code Samurai Inter University Hackathon 2024: Member of team *DU_Diligence*, placing third nationally among inter-university teams; judged on rapid development and final-round presentation of a working solution to a real-world waste management problem.

2nd Place, Al-Khwarizmi CTF Contest 2025: Member of a four-member team, placing second nationally in this cybersecurity capture-the-flag competition at Al-Khwarizmi Science Fest 2025.

Top 10 Finalist, MicroOps Hackathon, CUET CSE Fest 2025: Built an end-to-end automated microservices pipeline with CI/CD, service mesh, and observability during an intensive 11-hour onsite sprint.

1st Place, DU CTF 2024: Member of team *DU_MPLING* in this university-wide CTF competition covering reverse engineering, web exploitation, and forensics.

Honorable Mention, Asian Pacific Mathematical Olympiad: Recognized as top solvers in 2019 & 2021 in this prestigious international mathematics competition for pre-university students.

National Champion, Bangladesh Mathematical Olympiad: National winner in 2013, 2017 (Junior Category Champion), 2018, and 2021; competed yearly from 2013–2021 with regional wins and consistent advancement to National Camps.

Bangladesh IMO Team Selection Test (TST), 2019 & 2020: Qualified for and sat the national selection tests that choose Bangladesh's team for the International Mathematical Olympiad.

2nd Place, 1st Undergraduate Research Summit 2023, University of Dhaka.

3rd Place, SCB-PA Inter School College Programming Contest (ISCPC) 2020.

Projects

Bangla Photocard Verifier | *YOLOv8-cls, ONNX, FastAPI* | Research | Group of 4 | Live Demo | GitHub

- Visual-forensic classifier that flags **fabricated Bengali news photocards** from layout and typography cues, at **97.4% accuracy** (±0.4%) under leak-free **group 5-fold cross-validation**, folds grouped by source image so augmented variants never leak across splits.
- Owned data and evaluation: labelled **337 originals**, augmented to 3,800, and benchmarked **Ultralytics YOLOv8-cls** against **TensorFlow/Keras** ANN and CNN baselines; co-authoring an IEEE-format paper.
- Shipped the public web app: exported to **ONNX** and served on onnxruntime, cutting the container from 1.9 GB to roughly 300 MB, behind FastAPI with a **feedback loop** persisting user corrections to a Hugging Face dataset.

Hopper | *Go, gRPC, Python, FastAPI, K8s, NATS, PostgreSQL, Docker* | Academic Project | GitHub

- Co-architected a distributed, microservices-based **VM cloud platform**, developing a gRPC orchestration engine in Go to interface with the Kubernetes API.
- Authored domain models with complex transactional logic, including an immutable double-entry credit ledger secured by **PostgreSQL** advisory locks.
- Engineered automated containerization and multi-service **CI/CD** pipelines to streamline deployment across the distributed architecture.

KitchenMate | *Flutter, Dart, Firebase, Supabase* | Group of 4 | GitHub

- Cross-platform cooking assistant with ingredient management, recipe discovery, timers, and offline support. Built email/Google auth, recipe search and filter, and the to-do feature.
- **Contributed to Firebase and Supabase integration**, covering initial connection, schema setup, and ongoing database maintenance.

AI Study Helper | *Next.js, Python - FastAPI, ChromaDB, Gemini API* | Academic Project | Group of 4 | GitHub

- Full-stack AI-powered document Q&A system using **Retrieval-Augmented Generation (RAG)** for intelligent study assistance. Students can upload PDF documents and ask natural language questions to receive context-aware answers.
- Built the FastAPI backend on a **ChromaDB vector database** for semantic search with **Gemini** embeddings and responses, **Celery and Redis** for async PDF processing, and a Next.js frontend with Supabase auth, persistent chat sessions, and per-user document isolation.

SecureFile | *Python* | Academic Project | Group of 2 | Backend - GitHub | Desktop App - GitHub

- A desktop app that lets a user store files securely on the cloud with server-side encryption.
- Implemented TCP-style reliable data transfer and flow control at the application layer, with file chunking and **AES-256** server-side encryption per chunk behind a Qt desktop client.

Hill Climb Racing Clone | *C++, SDL2, Custom Physics Engine* | Academic Project | Group of 2 | GitHub

- 2D physics-based game recreation with custom collision detection, fuel management, and audio. Designed the custom physics engine and **Entity Component System (ECS)** architecture, plus the input and rendering systems.
